Space after period and kerning tests

Vincent Lefèvre

August 4, 2013

If a period following a capital letter ends a sentence, it must be followed by "\spacefactor=\sfcode'\.{}" to reset the *spacefactor* to default. "\@" must not be used before the period as it destroys kerning. The following tests are based on information at `http://tex.stackexchange.com/questions/55105/when-should-i-use-intersentence-spacing`.
